

Assisgnment 1

Q1

a. hospial portal b. school enroll system

Q2

a. data sharing app b. research publishing app c.student chatting app

Q3

The data stored in SQL databases are well-structured and can be retrieved efficiently and effectively. But the unstructured data produced by multiple social media platforms stored in NoSQL databases could not be retrieved with high efficiency; thus, data mining is needed to discover the tendency and correlation between the complex data.

Q4

There are more internet bad digital data and people will have more access to collect and stroge data instead of on paper. will be more in database.
